Chromosomes, obtained from the fibroblast cell line of the Indian muntjak (*Muntiacus muntjak*, $2n = 7$, in males, $2n = 6$, in females) were described with the use of G-, C-, CDAG- and AgNOR-staining and *in situ* localization of 18S, 5.8S and 28S ribosomal genes.

Keywords: Indian muntjac, chromosomal banding patterns, karyotype, $2n$
